Mobile Transformer

Special Transformer

Medium Power Transformers with a power range from 40 to 200 MVA and a voltage of over 72.5 kV typically used as network transformers in distribution networks. These types of transformers are normally 3-phase application and are designed according to international standards such as IEC 60076. Normally, the cooling types of Medium Power Transformers are ONAN (oil-natural, air-natural) or ONAF (oil-natural, air-forced). Tapping can be designed with both off-circuit or on-load tap changers.

Some samples of our experiences in this group

Customer	Rated Power (MVA)	Rated Voltage HV/MV/LV (KV)	Vector Group	Cooling
Esfehan Reg.Elec.co	150	400/63/20	YNyn0d11	ONAN/ONAF
Esfehan Reg.Elec.co	160	230/66/20	YNyn0d11	ONAN/ONAF
